CONFIDENTIAL • OFFICIAL GOVERNANCE & OPERATIONS MANUAL

JuwishPro Platform Administration & System Governance Manual

A Complete Technical and Operational Reference for Platform Administrators, Compliance Officers, Risk Managers, and Financial Controllers.

Document Version:	v2.4.0 (Enterprise Production Build)
Release Date:	October 2026
Classification:	**RESTRICTED & PROPRIETARY** (Authorized Personnel Only)
Target Infrastructure:	JuwishPro Core Server (Ubuntu 24.04 LTS / PHP 8.4 / Laravel 12)
Official Mail Relay:	info@juwishcoin.online (Hostinger SMTPS Port 465 SSL/TLS)
Production Cluster:	2026.dmillers.org (Backend Engine) & juwishcoin.online (Client Portal)
Audited By:	Global Security Operations & Compliance Committee

ADMINISTRATOR BEST PRACTICE

Executive Mandate: This operational manual establishes mandatory protocols, standard operating procedures (SOPs), financial reconciliation workflows, risk thresholds, and compliance controls for managing the JuwishPro multi-asset financial exchange. Every administrator must adhere strictly to these guidelines when executing balance adjustments, reviewing KYC submissions, approving withdrawals, and configuring trading engine parameters.

Table of Contents

Section 1: Platform Overview & System Architecture	Page 3
Section 2: Administrator Access, Authentication & Security	Page 3
Section 3: User Directory & Lifecycle Operations	Page 4
Section 4: KYC & Regulatory Compliance Review	Page 5
Section 5: Deposit Operations & Payment Gateways	Page 6
Section 6: Withdrawal Processing & Risk Controls	Page 7
Section 7: Trading Engines Governance (Futures, Margin, Forex, Equities)	Page 8
Section 8: Automated Investment Plans & JuwishCoin Staking	Page 8
Section 9: Core Platform Settings & Financial Configuration	Page 9
Section 10: Email Notification System & Hostinger SMTPS	Page 9
Section 11: Automation Cron Engine & Health Checks	Page 10
Section 12: Security Audits, Cache Management & Disaster Recovery	Page 10

SECURITY & COMPLIANCE WARNING

Strict Compliance Rule: Actions performed in the Admin Portal are permanently audited. Modifications to user balances, withdrawal approvals, and security resets generate immutable timestamped records in the database audit log.

1. Platform Overview & System Architecture

JuwishPro is a high-frequency, institutional-grade financial ecosystem engineered to manage cryptocurrency spot and derivatives (Futures & Margin), foreign exchange (Forex), and traditional capital instruments (Stocks, ETFs, Bonds, Commercial Papers). The backend is driven by Laravel 12 and PHP 8.4 on Linux, utilizing a hardened MySQL transactional engine, Redis-backed rate limiting, and asynchronous email processing over secure SMTPS.

The platform architecture separates user access domains and administrative consoles to enforce strict defense-in-depth:

- **Public Apps Portal (juwishcoin.online):** Dedicated lightweight landing and app distribution gateway hosting native installers for Android (.apk), Windows (.exe), macOS (.zip), and iOS/iPad (.ipa & PWA). Zero web trader buttons are exposed here to preserve mobile and native workstation security.
- **Core Trading & Admin Engine (2026.dmillers.org):** The underlying high-performance transactional server managing database persistence, API endpoints, payment webhooks, matching engines, and authenticated administrator routes.
- **Asynchronous Mail Infrastructure:** Hostinger Secure SMTP relay operating strictly over SSL/TLS Port 465 with DKIM, SPF, and DMARC verification to guarantee transactional email deliverability.

Subsystem	Underlying Technology	Security Perimeter & Role
Core Backend	Laravel 12 / PHP 8.4	MVC architecture, middleware-gated sandboxing, CSRF protection
Relational DB	MySQL InnoDB	ACID transactional consistency, foreign-key constraints, row locking
Client Apps	Native APK, EXE, macOS, iOS	Encrypted offline storage, biometric Face/Touch ID, SHA-256 integrity
Payment Engine	NOWPayments + Manual Gateways	Multi-crypto addresses, QR codes, instant IPN hash validation
Cron Engine	Linux Cron / Artisan Scheduler	Periodic ROI disbursement, market price feeds, liquidation checks

2. Administrator Access, Authentication & Security

Administrative access represents the highest trust level within the ecosystem. The platform enforces multi-factor authentication, device signature tracking, and automatic session lockouts on all administrative entrypoints.

Primary Administrative Routes:

- /admin/login : Primary authentication portal requiring valid email, password, and optional captcha.
- /admin/verify/otp : Mandatory secondary One-Time Password verification sent directly to the administrator's authorized email.
- /admin/forgot-password : Secure password reset requiring multi-step verification code and email confirmation.
- /admin/dashboard : Main operational analytics nerve center.

SECURITY & COMPLIANCE WARNING

Brute-Force & Session Protection: Repeated invalid login attempts trigger an exponential IP block. Admin sessions automatically expire after 15 minutes of inactivity (configurable under Security Settings). Never access the admin portal over unsecured public Wi-Fi networks without an enterprise VPN.

3. User Directory & Lifecycle Operations

The User Management module (/admin/users) allows administrators to inspect user accounts, monitor trading behavior, perform financial balance adjustments, verify identity compliance, and dispatch communications.

3.1 Navigating the User Directory

The directory table provides instant search and filtering capabilities across several critical dimensions:

- **Account Status:** Active (trading permitted), Suspended (temporary hold), Banned (permanent block).
- **Verification Level:** Email verified/unverified, KYC level (Unverified, Pending, Approved, Rejected).
- **Financial Balances:** Real-time display of Main Wallet Balance, Trading Capital, and Bonus funds.

3.2 Financial Credit & Debit Operations

To adjust a user's balance manually (for example, to credit an offline wire transfer, deposit correction, promotional bonus, or debit an adjustment):

1. Navigate to /admin/users/view/{id} to open the detailed User Profile Dossier.
2. Click on the **Credit / Debit** action button.
3. Select the **Operation Type**: Credit (Add Funds) or Debit (Subtract Funds).
4. Select the **Target Wallet**: Main Wallet Balance, Trading Account Balance, or Bonus Balance.
5. Enter the exact numerical amount and provide a mandatory **Audit Remark / Reason**. This remark is recorded in the transaction ledger and appears on user account statements.
6. Confirm the submission. The user's ledger updates instantaneously without requiring a logout.

3.3 'Login As User' (Impersonation Mode)

Administrators can troubleshoot customer support inquiries by launching an impersonated session via /admin/users/login-as/{id}. This signs the administrator into the client portal exactly as the user sees it. While in impersonation mode, financial actions (like withdrawing funds) should be exercised with extreme caution to avoid altering actual client ledger states.

3.4 User Communication & Bulk Email Campaigns

- **Individual Direct Email:** Send targeted notifications with rich attachments directly from /admin/users/view/{id}.
- **Bulk Broadcast Campaigns:** Access /admin/users/bulk-email to broadcast platform notices, market alerts, or security reminders to all registered users or filtered sub-segments.

SECURITY & COMPLIANCE WARNING

Mandatory Audit Trail: Every manual credit or debit generates an irreversible ledger entry in the transactions table. Administrators are personally accountable for all balance modifications.

4. KYC & Regulatory Compliance Review

To satisfy international Anti-Money Laundering (AML) and Counter-Terrorist Financing (CTF) regulations, JuwishPro features a comprehensive Know-Your-Customer review engine accessible at /admin/kyc.

Tier Level	Required Documentation	Account Privileges Granted
Tier 1 (Basic)	Email verified, mobile confirmed	Deposits allowed; Trading allowed; Withdrawals locked ($0 limit)
Tier 2 (Verified)	Government Photo ID (Passport/National ID)	Full crypto & fiat access; Daily withdrawal up to $50,000
Tier 3 (Institutional)	Proof of Address (Utility bill) + Selfie with ID	Unlimited withdrawals; 100x leverage access; Priority OTC trading

Step-by-Step KYC Review Procedure:

1. Open the verification queue at /admin/kyc and select a pending submission.
2. Verify that the user's registered full name matches the document name character-for-character.
3. Inspect the document image for clarity, valid expiration date, and absence of digital tampering.
4. Click **Approve** to promote the user's tier immediately, or **Reject** with a specific explanation (e.g., 'Document expired', 'Image edges cropped', 'Name mismatch').
5. The system automatically dispatches a branded notification email to the user indicating the verdict.

5. Deposit Operations & Payment Gateways

Deposit management (/admin/deposits) enables monitoring and validation of incoming capital across both automated and manual cryptocurrency and fiat payment gateways.

5.1 Managing Payment Accounts & Gateways

Under /admin/settings/deposit, administrators configure the payment methods presented to traders:

- **Cryptocurrency Addresses:** Configure deposit addresses for Bitcoin (BTC), Ethereum (ETH), Tether (USDT TRC20 / ERC20), and Solana (SOL). Include exact network tags and upload clear QR code images.
- **Bank Wire Coordinates:** Specify Beneficiary Name, Bank Name, SWIFT/BIC, IBAN, and account number. Ensure the instruction text commands users to include their unique reference code in wire descriptions.
- **Automated Gateways (NOWPayments):** Enter the production API Key and IPN Secret. When activated, incoming blockchain payments trigger instant webhook callbacks, crediting user accounts automatically upon network confirmation.

5.2 JuwishCoin (JWC) Dashboard Purchase Integration

Users can purchase JuwishCoin directly from their dashboard (/user/deposits/buy-juwishcoin) as a seamless deposit mechanism. The system calculates the token allotment based on the base price ($0.10/JWC) and promotional tiers. Administrators can monitor JWC liquidity and adjust pricing formulas under Financial Settings.

5.3 Reviewing & Approving Pending Deposits

For manual deposits where users upload receipts or transaction hashes:

1. Open /admin/deposits and filter by **Pending**.
2. Click **View** on the transaction reference to inspect the submitted receipt image and transaction hash.
3. Cross-reference the hash on the appropriate public blockchain explorer (e.g., Etherscan, Tronscan, Blockchain.com) to confirm that the funds were genuinely received at the platform's cold/hot wallet.
4. Click **Approve**. The system transitions the status from Pending to Approved, credits the user's Main Wallet, and triggers an approval email.
5. If fraudulent or unverified, click **Reject** and specify the reason.

SECURITY & COMPLIANCE WARNING

Zero Tolerance for Unverified Deposits: Never approve a deposit receipt without independently verifying the blockchain transaction hash or bank statement credit. Fraudulent receipt images must be immediately rejected and the user flagged.

© 2026 JuwishPro & JuwishCoin Global Ecosystem. All rights reserved. • Hostinger SMTPS Active

6. Withdrawal Processing & Risk Controls

Withdrawal operations (/admin/withdrawals) require the highest level of administrative scrutiny. When a user requests a withdrawal, the system locks the requested funds in escrow to prevent double-spending.

Withdrawal Risk Checklist (Must Verify Before Approval):

1. **KYC Verification:** Ensure the client has completed Tier 2 or Tier 3 identity verification.
2. **Trading Margin Health:** Check if the client has open leveraged futures or margin positions. Do not approve withdrawals if remaining margin is near liquidation thresholds.
3. **Deposit Confirmation:** Verify that the original deposit was completed over 24 hours ago (anti-money laundering holding rule).
4. **Wallet Address Whitelisting:** Confirm destination address matches known valid checksum formats.

Execution Workflows:

• **Approving Crypto Payouts:** Send the payout from the platform treasury wallet, record the public TXID in the admin prompt, and click **Approve**. The locked escrow is debited, and the user receives confirmation.

• **Rejecting Withdrawals:** If rejected, click **Reject** with a reason. The locked escrow is *automatically restored* back to the user's available wallet balance immediately.

7. Trading Engines Governance (Futures, Margin, Forex, Equities)

JuwishPro incorporates four distinct execution engines. Administrators maintain oversight over market liquidity, spreads, leverage ceilings, and open exposure via the administrative trading consoles.

Engine	Route Prefix	Core Configurable Parameters
Futures Derivatives	/admin/futures-trading	Leverage (1x - 100x), Margin Mode (Cross/Isolated), Funding rate interval, Liquidation ratio
Margin Trading	/admin/margin-trading	Borrowing interest rate (%/day), Collateral haircuts, Margin call threshold (85%), Liquidation (95%)
Forex Currency	/admin/forex-trading	Pairs (EUR/USD, GBP/USD, etc.), Spread pips, Lot sizing (Standard, Mini, Micro), Rollover swaps
Capital Instruments	/admin/stocks, /etfs, /bonds	Asset listing, share price, minimum purchase volume, dividend schedules, maturity dates

7.1 Monitoring Futures & Margin Positions

Administrators can inspect open positions at /admin/futures-trading/positions and /admin/margin-trading/positions. The console displays Mark Price, Entry Price, Position Size, Unrealized PnL, and distance to Liquidation. In the event of an anomalous market spike, administrators have the capability to manually close toxic positions or pause trading on specific pairs.

7.2 Capital Instruments Administration

Equities, ETFs, and Bonds are administered under their dedicated management modules. Administrators can update current trading prices, issue corporate action notices, and execute dividend disbursements directly into shareholder balances.

8. Automated Investment Plans & JuwishCoin Staking

The automated investment engine (/admin/investments) manages structured quantitative yield strategies, trading bots, and JuwishCoin staking liquidity pools.

8.1 Creating a New Investment Plan

To launch a new automated investment strategy (e.g., 'AI Crypto Quant Fund' or 'JuwishPro Yield Staking'):

1. Navigate to /admin/investments/plans/create.
2. Enter the **Plan Name**, descriptive tag, and icon graphic.
3. Define **Minimum Deposit** and **Maximum Deposit** limits (e.g., $500 min, $50,000 max).
4. Set the **Return Rate (%)** and **Return Interval** (Hourly, Daily, Weekly, or Monthly).
5. Define the **Duration Period** (e.g., 30 Days, 90 Days, 365 Days).
6. Configure **Capital Return**: Select Yes if the principal is returned upon plan maturity, or No if the principal is amortized across interest payments.
7. Save and activate the plan. It will instantly appear on user investment dashboards.

8.2 Monitoring Active Investments & Yields

Under /admin/investments, administrators view all active investment contracts, cumulative earnings paid, and upcoming maturities. In exceptional market circumstances, an administrator can pause return distributions on specific plans.

9. Core Platform Settings & Financial Configuration

The system settings suite (/admin/settings) provides granular control over platform behavior, financial margins, security policies, and modular feature toggles.

Settings Module	Route Endpoint	Operational Impact
Core Settings	/admin/settings/core	Platform Name, Support Email, Base Currency (USD), Default Timezone, Brand Logos
Activation Toggles	/admin/settings/activation	Enable/disable Registration, KYC Enforcement, Email Verification, Trading, Bot engine
Financial Settings	/admin/settings/financial	Taker/Maker trading fees, Deposit fees, Minimum withdrawal limits, Multi-tier referral %
Security Settings	/admin/settings/security	Session timeout minutes, Max failed login attempts, Password complexity enforcement
Bonus System	/admin/settings/bonus-system	Welcome signup bonus credit, First deposit match bonus %, Turnover wagering multipliers
Live Chat & SEO	/admin/settings/livechat, /seo	Tawk.to / LiveChat widget script tags, OpenGraph metadata, Google indexing tags

9.1 Maintenance Mode Procedure

To perform scheduled maintenance or software updates, navigate to /admin/settings/activation and toggle **Maintenance Mode** to ON. Traders will see a branded maintenance notice while administrators retain full access.

10. Email Notification System & Hostinger SMTPS

Transactional emails are mission-critical for 2FA OTP codes, deposit confirmations, and withdrawal receipts. JuwishPro is configured with Hostinger Secure SMTP relay operating over Port 465 with SSL/TLS encryption.

Parameter	Production Value	Description
MAIL_MAILER	smtp	Standard SMTP protocol driver
MAIL_HOST	smtp.hostinger.com	Dedicated Hostinger enterprise SMTP server
MAIL_PORT	465	Implicit SSL/TLS secure communication port
MAIL_ENCRYPTION	ssl	Mandatory end-to-end socket encryption
MAIL_USERNAME	info@juwishcoin.online	Authorized platform sending mailbox
MAIL_FROM_ADDRESS	info@juwishcoin.online	Official Sender Identity

10.1 Testing Email Deliverability

Administrators can verify mail relay health at any time by navigating to /admin/settings/email, entering an external recipient address, and clicking **Send Test Email**. A successful dispatch confirms full DNS, port, and credential resolution.

© 2026 JuwishPro & JuwishCoin Global Ecosystem. All rights reserved. • Hostinger SMTPS Active

11. Automation Cron Engine & Health Checks

The automated background scheduler executes recurrent financial calculations, market updates, and yield distributions. It is triggered every minute via the system crontab on the host server.

Scheduled Task	Frequency	Operational Function
Investment ROI Payout	Every Minute / Hourly	Calculates and credits daily/hourly percentage returns to user balances
Plan Maturity Check	Every 5 Minutes	Identifies expired contracts, closes investment, and returns capital if enabled
Market Price Feeds	Every Minute	Fetches real-time crypto & forex prices from market liquidity providers
Liquidation Scanner	Continuous (Sub-minute)	Checks open futures/margin positions against maintenance thresholds
Cache & Session Purge	Daily at Midnight	Clears expired user sessions, temporary files, and rate-limiting buckets

11.1 Verifying Cron Execution

To inspect the cron execution status in the administration portal, navigate to /admin/settings/cronjob. The panel indicates the timestamp of the last successful run. If more than 5 minutes have elapsed since the last run, verify that the server crontab (crontab -e) contains the directive: * * * * * cd /home/dmiloplj/2026.dmillers.org && /usr/local/bin/php artisan schedule:run >> /dev/null 2>&1.

12. Security Audits, Cache Management & Disaster Recovery

System reliability and compliance require routine health assessments, cache purges, and automated backups.

12.1 Security Audit Engine & PDF Report

Navigate to /admin/settings/audit to run an automated platform health check. The engine validates database connectivity, folder write permissions (storage/, bootstrap/cache/), environment variables, and active security modules. Administrators can click **Export Audit PDF** (/admin/settings/audit/pdf) to produce a certified compliance report.

12.2 Clearing Application Caches

When settings or email templates are updated, clear the application cache by visiting /admin/settings/system and clicking **Clear System Cache** (executes config:clear, route:clear, and view:clear).

12.3 Disaster Recovery & Database Backups

- **Daily Database Snapshots:** Automated daily MySQL dumps are generated and stored in encrypted off-site repositories.
- **Key Rotation Policy:** Administrative passwords and API keys (NOWPayments, OAuth secrets) should be rotated every 90 days.
- **Emergency Server Restoration:** In the event of primary host degradation, the secondary failover cluster can be brought online within 15 minutes by repointing DNS records for juwishcoin.online and 2026.dmillers.org.

ADMINISTRATOR BEST PRACTICE

Certification of Authority: This operations manual is certified by JuwishPro Security Engineering & Compliance. Any unauthorized duplication, dissemination, or distribution outside authorized administrative personnel is strictly prohibited.
